ABSTRACT (ENGLISH).....	ii
ABSTRACT (THAI).....	v
ACKNOWLEDGEMENT.....	vii
TABLE OF CONTENTS.....	viii
LIST OF TABLES.....	xii
LIST OF FIGURES.....	xiii
CHAPTER	
1 INTRODUCTION	1
Statement of the problem	1
Research Objectives	5
Research Questions	5
Expected Outputs	5
Scope of Study.....	6
Definitions	8
2 LITERATURE REVIEW	10
Reviewing Relevant Concepts, Theories and/or Principles...	10
Forests in Thailand.....	10
Biodiversity	12
Forest Fragmentations	18
Thai Forest Master Plan	37
Forest Resource Conservation	40
Community Forests	42
Life cycle	44

TABLE OF CONTENTS (CONTINUED)

	PAGE
Forest recovery	47
The Bell Curve Theory Based on Age of Development.....	54
Economy and Development	55
Economic Value of Forestry	61
Carbon credits	61
Tree Bank	63
Small Hydropower Plants	65
Review of Research Related to Community Forest Restoration..	67
3 RESEARCH METHODOLOGY.....	73
Conceptual Framework	73
Comparisons of the characteristics and the compositions the Community forests and natural forests.....	74
Analyses of problem of forest restoration.....	91
Development of model for forest restoration.....	93
Evaluation of economic values of community forests and natural forests.....	95
Economic value of community forests and natural forests according to carbon storage.....	95
Economic value of community forests and natural forests according to the Tree Bank scheme.....	97
Economic value of community forests and natural forests from small hydropower plants.....	100
4 RESULTS AND DISCUSSIONS	102
Characteristics and composition of community forests and natural forest.....	102
Results of natural forest field survey.....	102
Baan Sam Kha Community Forest.....	104

TABLE OF CONTENTS (CONTINUED)

	PAGE
Baan Sa Sob Hok Community Forest.....	104
Ban Rai Sila Thong community forest.....	105
Baan Ton Tong community forest.....	106
Comparison between the four forest communities.....	124
Comparisons of the characteristics and compositions of the four community forests and natural forests.....	131
The results of the analysis of the problems of community forest restoration.....	134
Baan Sam Kha Community Forest.....	134
Baan Sa Sob Hok Community Forest.....	137
Ban Rai Sila Thong community forest.....	140
Baan Ton Tong community forest.....	143
Conceptual framework of forest development.....	149
Trees selecting for Solar Energy Maximizing concept	155
Sequence of tree's planting for moisture restoration...	160
Numbers of trees planting for moisture restoration....	162
Verifications of the Water-drawing trees' roots model	165
The results of current economic valuation of community forests and natural forests.....	171
Carbon storages of community forests and natural forests.....	171
Wood volume from Tree Bank scheme of community forests and natural forests.....	172
Small hydropower plants of community forests and natural forests.....	174
Discussion.....	176

5 CONCLUSION AND RECOMMENDATIONS.....	202
Conclusion.....	202
Recommendations.....	207
REFERENCES.....	211
CURRICULUM VITAE.....	223
APPENDICE.....	224
Appendix A Valuation of tree with intermediate growth rate, long period of cutting cycle and High value of wood.....	225
Appendix B Lists of Expert for Verification of Questions.....	227
Appendix C Observation Form: Characteristic and Composition of Community Forest.....	228
Appendix D List of Participants.....	231
Appendix E Interview Form for collecting the problems of community forest restoration.....	234
Appendix F List of experts in reforestation with Water – drawing trees' roots model.....	236
Appendix G List of representative for Water-drawing trees' roots model verification.....	237
Appendix H Interview Form.....	239
Appendix I Interview Form verifying Water – Drawing tree's Roots Model.....	244

LIST OF TABLES

		PAGE
Table 4.1	Name, species and number of trees surveyed in four community forest areas.....	108
Table 4.2	Compares the tree diversity index of community forests.....	126
Table 4.3	Attributes and compositions of the four community forests.....	129
Table 4.4	Main compositions of community forests compared with Mae Mon nature forest.....	130
Table 4.5	Current attributes of the four community forests compared with Mae Mon Natural forest.....	132
Table 4.6	List of tree species existing in the past and present in community forests	148
Table 4.7	Moisture restoration criteria and lists of species	157
Table 4.8	Experts suggestions of Water-drawing trees' roots model	167
Table 4.9	Valuation of carbon stocked in community forests and natural forest.....	171
Table 4.10	Financial values of community forests, according to the Tree Bank, in comparison with Mae Mon natural forest.....	174
Table 4.11	Comparison of forest restoration methods in different ways, using only water – drawing trees' roots model and focus on evergreen trees, planting area at 1 year old trees.....	187
Table 4.12	The criteria for determining the characteristics of dry evergreen forest in Lampang province.....	196

LIST OF FIGURES

	PAGE
Figure 1.1 Locations of the community forests and natural forest.....	7
Figure 2.1 Satellite images comparing changes in Amazon rainforest that occur between 1975 and 2012.....	18
Figure 2.2 Variation of monthly solar energy levels on the earth surface in different regions each year. Figure show the intensity of light that does not change markedly in the equatorial area.....	45
Figure 2.3 Monthly light intensity levels in upper Northern provinces in 2007.....	46
Figure 2.4 A bell curve representing characteristics of a product's life cycle	55
Figure 2.5 Watershed and mountainous area.....	70
Figure 2.6 Roles of surface – covering plants in promoting water supply in streams.....	71
Figure 3.1 Conceptual Framework of the study	73
Figure 3.2 Baan Sam Kha community forest is demarcated by the red line..	75
Figure 3.3 Sampling points in valley of actual viewed map.....	76
Figure 3.4 Sampling points are laid in the valley of topographic map at the scale of 1:50,000.....	76
Figure 3.5 Baan Sa Sob Hok community forest is demarcated by the red line.....	77
Figure 3.6 Sampling points in valley of actual viewed map.....	77
Figure 3.7 Sampling points are laid in the valley of topographic map at the scale of 1:50,000.....	77
Figure 3.8 Baan Rai Sila Thong community forest is demarcated by the red line.....	78
Figure 3.9 Sampling points in valley of actual viewed map.....	78

LIST OF FIGURES (CONTINUED)

	PAGE
Figure 3.10 Sampling points are laid in the valley of topographic map at the scale of 1:50,000.....	79
Figure 3.11 Baan Ton Tong community forest is demarcated by the red line.....	79
Figure 3.12 Sampling points in valley of actual viewed map.....	80
Figure 3.13 Sampling points are laid in the valley of topographic map at the scale of 1:50,000.....	80
Figure 3.14 Data collection with PCQ method at a survey point.....	81
Figure 3.15 The relationship between number of sampling points and cumulative species of tree.....	82
Figure 3.16 Mae Mon natural forest is demarcated by the red line.....	85
Figure 4.1 Number of tree species found in each community forest.....	124
Figure 4.2 Proportions of tree found in each forest.....	125
Figure 4.3 Proportions of trees as categorized by their growth in each community forest.....	126
Figure 4.4 Interview with representative of Baan Sam Kha (Mr.Boonruan Taokam).....	134
Figure 4.5 Interviews of representatives from Baan Sa Sob Hok.....	138
Figure 4.6 Resource persons of Baan Rai Sila Thong.....	141
Figure 4.7 Some representatives from Baan Ton Tong.....	144
Figure 4.8 A sketch depicted problematic forests from reforestation done by the four communities.....	150
Figure 4.9 Conventional forest restoration of the four communities with people participation.....	151
Figure 4.10 Concept of Solar Energy Maximizing (SEM). Evergreen trees are predominated in order to increase capability of moisture retaining.....	154

LIST OF FIGURES (CONTINUED)

	PAGE
Figure 4.11 Forest restoration with the Water – drawing trees’ roots model	159
Figure 4.12 A sketch of reforestation with water – drawing trees’ roots model.....	164
Figure 4.13 The model of rehabilitating a forest with the “Water – drawing trees’ roots” process. The model would shorten forest development to 30 years.....	170
